Natl. Acad. Sci. U.S.A. 99:16899-16903(2002).

-!- FUNCTION: Mediates the endocytosis of plasma glycoproteins to which the terminal sialic acid residue on their complex carbohydrate moieties has been removed. The receptor recognizes terminal galactose and N-acetylgalactosamine units. After ligand binding to the receptor, the resulting complex is internalized and transported to a sorting organalle, where receptor and ligand are disassociated. The receptor then returns to the cell membrane
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               -i- SUBUNIT: Interacts with LASS2 (By similarity).
-i- SUBCELLULAR LOCATION: Type II membrane protein.
-i- TISSUE SPECIFICITY: Expressed exclusively in hepatic parenchymal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Signal-anchor for type II membrane protein (Potential). Extracellular (Potential).

Divided lectin 2 - rat

Nighternate names: asialoglycoprotein receptor RHL-2/3 (ASGP-R2/3)

C.Species: Rattus norvegicus (Norway rat)

R.Halberg, D.F.; Wager, R.E.; Parroll, D.C.; Hildreth IV, J.; Quesenberry, M.S.; Loeb, J. Biol. Chem. 262, 9828-9838, 198771.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    요
```

IGE Fc receptor, low-affinity - mouse N;Alternate names: Blast-2; CD23; Fc-epsilon-RII; lymphocyte IgE receptor C;Species: Mus musculus (house mouse)

```
CyAccession: A4518; A33840.

C;Comment: This receptor for the Fc portion of IgE is expressed in various hematopoietical approximation: intracellular #status predicted acid.
C;Cyment: This receptor II; C-type lectin homology
C;Keywords: B-cells: appropriate repeat
F;1-22/Region: stop-transfer sequence
F;1-22/Region: stop-transfer repeat
F;1-22/Region: 21-residue repeat
F;1-21/Region: 21-residue repeat
F;109-128/Region: 21-residue repeat
F;186-316/Nomain: C-type lectin homology acid.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  FEATURE:
NAME/KEX: misc_feature
NAME/KEX: misc_foature
OCCATION: (1064).
OCCATION: (1064).
OCHER INFORMATION: nucleotide 1064 of DCMP2s may be A, which would encode Asn rather
OTHER INFORMATION: than Asp at the residue numbered 270
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   FEATURE:

Claim 2; Page 68-69; 82pp; English.

Dendritic cell membrane protein 1 (DCMP1) and DCMP2 nucleic acids can be used as markers for distinguishing cell types, including genomic aspects of cells, as well as mRNA and protein expression patterns. They can also

used as markers for distinguishing cell types, including genomic aspects of cells, as well as mRNA and protein expression patterns. They can also be used to detect chromosomal abnormalities. The proteins can be used to diagnose disorders associated with expression misregulation. They can also be used to treat conditions associated with abnormal physiology or development, including abnormal proliferation, e.g. cancerous conditions of degenerative conditions. Abnormal proliferation, regeneration, degeneration and atrophy may be modulated using the proteins. The proteins may also play a role in regulation or development of haematopoietic cells

The invention fractes to numeral moves polymucicotides and associated treating inflammatory conditions such as arthritis, nephritis, Crohn's disease, ischaemia-repertusion injury, shock, sepsis, immune responses and cancer and for promoting wound healing. The sequences are used to induce the proliferation of neural cells and regeneration of nerve and brain tissue, and are useful for the treatment of central and peripheral nervous system diseases and neuropathies, such as Alzheimer's disease, Parkinson's disease, Huntington's disease and amyotrophic lateral celerosis. The sequences are involved in chemotactic or chemokinetic activity, regulation of haematopolesis, treatment of myeloid or lymphoid cell disorders and platelet disorders such as thromboytopenia, cartilage, tendon, ligament and/or nerve tissue cylowith, tissue repair, healing of burns, incisions, ulcers, treatment of seconds of sequences of the invention are also useful for gut protection or regeneration and treatment of lung or liver fibrosis, reperfusion injury in various tissues, immune deficiencies and disorders including severe combined immunodeficiency (SCID), bacterial or fungal infections, autoimmune disorders e.g. multiple sclerosis and myasthenia gravis, allergic conditions such as asthma, thrombolysis or thrombosis and coagulation disorders. Sequences ABG6666-ABG6758 represent human

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to human NOVX polypeptides and the polymucleotides encoding them. The polypeptides, polymucleotides and antibodies that bind immunospecifically to the polypeptides are useful in the manufacture of a medicament for treating a syndrome associated with a human disease, preferably a NOVX-associated disorder. The sequences are useful for treating, preventing or diagnosing diseases such as metabolic disorders, diabetes, obesity, infectious diseases (viral, bacterial, fungal, helminthic, and protozoal), anorexia, cancer, cardiovascular disorders (e.g. hypertension, atherosclerosis), neurodegenerative disorders (e.g. hypertension, atherosclerosis), ineurodegenerative disorders, asthma and various dyslipidemias. The nucleic acids and polypeptides may also be used as targets for the identification of small molecules that modulate or inhibit e.g. neurogenesis, cell differentiation, cell colliferation, haematopolesis, wound healing and anglogenesis, and in the generation of antibodies that bind immunospecifically to NOVX substances
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Boldog FL, Burgess CD, Lach V, Gorman L, Gunther E, Guo X;

New NOVX polypeptides and nucleic acids, useful for preventing or treating NOVX-associated disorders, e.g. cancer, diabetes, atherosclerosis, asthma or AIDS, and in chromosome mapping, tissue typing or pharmacogenomics.

The invention relates to human NOVX polypeptides and the polynucleotides encoding them. The polypeptides, polynucleotides and antibodies that bind immunospecifically to the polypeptides are useful in diagnosing, treating or preventing NOVX-associated disorders such as cardiomyopathy, atherosclerosis, hypertension, scleroderma, obesity, cancer, diabetes, multiple sclerosis, infections, anorexia, cancer-associated cachexia, neurodegenerative disorders (e.g. Alzbeimer's disease or Parkinson's disease), haematopoietic disorders and wasting disorders. The polynucleotides are also used as Mybridisation probes, in chromosome mapping and in tissue typing. The polypeptides are also useful as vaccines. This sequence represents a human NOVX polypeptide of the

The invention relates to human NOVX polypeptides and the polynucleotides encoding them. The polypeptides, polynucleotides and antibodies that bind immunospecifically to the polypeptides are useful in the manufacture of a medicament for treating a syndrome associated with a human disease, preferably a NOVX associated disorder. The sequences are useful for treating, preventing or diagnosing diseases such as metabolic disorders, diabetes, obesity, infectious diseases, eviral, bacterial, fungal, helminthic, and protozoal), anorexia, cancer, cardiovascular disorders (e.g. hypertension, atherosclerosis), neurodegenerative disorders, asthma and various dyslipidemias. The nucleic acids and polypeptides may also be used as targets for the identification of small molecules that modulate or inhibit e.g. neurogenesis, cell differentiation, cell conferation, haematopoiesis, would healing and andiogenesis, and in the generation of antibodies that immunospecifically to NOVX substances
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      83 TVAELQALISQGSSLEETIASLKAEVEGFKQERQAGVSELQEHTTQKAHLGHCPRCPSVC 142

The invention relates to human NOVX polypeptides and the polynucleotides encoding them. The polypeptides, polynucleotides and antibodies that bind immunospecifically to the polypeptides are useful in diagnosing, treating or preventing NOVX-associated disorders such as cardiomyopathy, atherosclerosis, hypertension, scleroderma, obesity, cancer, diabetes, multiple sclerosis, infections, anorexia, cancer-associated cachexia, neurodegenerative disorders (e.g. Alzheimer's disease or Parkinson's disease), haematopoietic disorders and wasting disorders. The polynucleotides are also used as hybridisation probes, in chromosome mapping and in tissue typing. The polypeptides are also useful as vaccines. This sequence represents a human NOVX polypeptide of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New NOVX polypeptides and nucleic acids, useful for preventing or treating NOVX-associated disorders, e.g. cancer, diabetes, atherosclerosis, asthma or AIDS, and in chromosome mapping, tissue typing or pharmacogenomics.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       TVAEIQALTSQGSSLEETIASLKAEVEGFKQERQAGVSELQEHTTQKAHLGHCPHCPSVC 142

These can indicator for autonimum entractable hepatities (AIH), a disease that can lead to cirrhosis and fatal intractable hepatities (Novel soluble derivatives (see AAM15249-50) comprise the extracellular domain or extracellular plus cytoplasmic domains of AGRR H1. These can be produced on a large scale, and free of contaminating liver antigens, by PCR amplification of relevant portions of AGRR H1 cDNA (see AAT66950) and expression in bacterial (pref. E. coll) or animal (pref. mammalian) host cells. AGRR L12 (see AAM15246) and its soluble derivatives (AAW1521-52) are also claimed. The recombinant derivatives (AAW1521-52) are also claimed. The recombinant derivatives (and distinguished from other diseases. The AGRR derivatives or full-length receptors can also be used for the analysis and purification of anialoglycoproteins and to develop

selected from one of the 2722 sequences defined in the specification. A polynucleotide of the invention may have a use in gene therapy. The human diagnostic and therapeutic polynucleotides (dithp) or polypeptides may be used to diagnose a particular condition, disease or disorder associated with human molecules, e.g. cell proliferative disorders, endocrine autoimune/finlammatory disorder, developmental disorder, endocrine disorder, neurological disorders, destrointestinal disorders, or infections caused by virus, bacteria, fundi or parasite. The dithp molecules may also be used in genetic mapping, in identifying individuals molecules may also be used in genetic mapping, in identifying individuals plymorphisms, as molecular weight markers, and for somatic or germine polymorphisms, as molecular weight markers, and for somatic or germine gene therapy. The present sequence represents a dithp protein of the gene therapy. The sequence data for this patent is not represented in the printed specification, but was obtained in electronic format directly from WIPO at www.wipo.int/pct/en/sequences/listing.htm
                                                                                                                                                                                                                                                                                                                                                                                                                                                                           60 FONSKFORDLVTLRTDFSNFTSNTVAELQALTSQGSSLEETIASLKAEVEGFKQERQAGV 119

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to novel diagnostic and therapeutic polymucleotides selected from one of the 2722 sequences defined in the specification. A polymucleotide of the invention may have a use in gene therapy. The human diagnostic and therapeutic polymucleotides (dithp) or polypeptides may be used to diagnose a particular condition, disease or disorder associated with human molecules, e.g. call proliferative disorders, endocrine disorder, neurological disorders, gastrointestinal disorder, or infections caused by virus, bacteria, fungi or parasite. The dithp molecules may also be used in genetic mapping, in identifying individuals from minute biological samples, in detecting single nucleotide polymorphisms, as molecular weight markers, and for somatic or germline polymorphisms, as molecular weight markers and for somatic or germline invention. Note: The sequence represents a dithp protein of the invention. Note: The sequence data for this parent is not represented in the printed specification, but was obtained in electronic format directly
                                                                                                                                                                                                                                                                                                                                                                 Wright RJ; Bruns CM, Marjanovic MM, Shen F;

The invention relates to novel diagnostic and therapeutic polynucleotides selected from one of the 2722 sequences defined in the specification. A purcleotide of the invention may have a use in gene therapy. The human diagnostic and therapeutic polynucleotides (dithp) or polypeptides may be used to diagnose a particular condition, disease or disorder associated with human molecules, e.g. cell proliferative disorders, endocrine disorder, neurological disorder, developmental disorders, or infections caused by virus, bacteria, fungi or parasite. The dithp conflections caused by virus, bacteria, fungi or parasite. The dithp infections caused by virus, bacteria, fungi or parasite. The dithp conflections caused by virus, bacteria, fungi or parasite. The dithp conflection in genetic mapping, in identifying individuals from minute biological samples, in detecting single nucleotide polymorphisms, as molecular weight markers, and for somatic or germline conflection. Note: The sequence represents a dithp protein of the invention. Note: The sequence data for this patent is not represented in the printed specification, but was obtained in electronic format directly from WIPO at www.wipo.int/pct/en/sequences/listing.htm

The invention relates to novel diagnostic and therapeutic polymucleotides selected from one of the 2722 sequences defined in the specification. A polymucleotide of the invention may have a use in gene therapy. The human diagnostic and therapeutic polymucleotides (dithp) or polymeptides may be used to diagnose a particular condition, disease or disorder associated with human molecules, e.g. cell proliferative disorders, or autoimmune/inflammatory disorder, developmental disorders, or infections caused by virus, bacteria, fungi or parasite. The dithp inflammators also be used in genetic mapping, in identifying individuals from minute biological samples, in detecting single nucleotide polymorphisms, as molecular weight markers, and for somatic or germline polymorphisms, as molecular weight markers, and for somatic or germline invention. Note: The sequence represents a dithp protein of the invention. Note: The sequence data for this patent is not represented in the printed specification, but was obtained in electronic format directly from NIPO at www.wipo.int/pct/en/sequences/listing.htm
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               60 FONSKFORDLVTLRTDFSNFTSNTVAEIQALTSQGSSLEETIASLKAEVEGFKQERQAGV 119

The invention relates to novel diagnostic and therapeutic polynuclectides selected from one of the 2722 sequences defined in the specification. A polynuclectide of the invention may have a use in gene therapy. The human polynuclectides (dithp) or polypeptides may be used to diagnose a particular condition, disease or disorder associated with human molecules, e.g. cell proliferative disorder, endocrine disorder, neurological disorder, developmental disorder, endocrine disorder, neurological disorder, gastrointestinal disorders, or infections caused by virus, bacteria, fungi or parasite. The dithp molecules may also be used in genetic mapping, in identifying individuals from minute biological samples, in detecting single nucleotide polymorphisms, as molecular weight markers, and for somatic or germline gene therapy. The present sequence represents a dithp protein of the invention. Note: The sequence data for this patent is not represented in the printed specification, but was obtained in electronic format directly
                                                                                                                                                                                                                                                                                                                       New diagnostic and therapeutic polynucleotides and polypeptides, useful in diagnosing a condition, disease or disorder associated with human molecules, e.g. autoimmune or inflammatory disorders, in gene therapy or

AAW15250 standard; protein; 274 AA

RESULT 15 AAW15250 ID AAW1 XX

```
This polypeptide sequence comprises the cytoplasmic (CTD) and extracellular (ECD) domains of human full-length asialoglycoprotein extracellular (ECD) domains of human full-length asialoglycoprotein creeptor (AGEP) H1 (See AAM15245). It can be produced on a large scale, in a form free of contaminating liver antigens, by PCR amplification (see AAM16962-65) of CTD+ECD DNA (see also AAAM16950), and expression in becterial (pref. E. coli) or animal (pref. mammalian) host cells. The ECD alone (AAM15249) and AGPR L-H2 derivatives (see AAM15251-52) are also claimed. The appearance of autoantibodies against AGPR can be used as an indicator for autoimmune hepatitis (AIH), a disease that can lead to cirrhosis and fatal intractable hepatitis. Recombinant soluble AGPR derivatives can be used in a claimed method for detecting and measuring anti-AGPR antibodies, e.g. by ELISA, Western blotting, etc. This allows AHH to be diagnosed and distinguished from other diseases. AGPR AHH to be diagnosed and distinguished from be used for the analysis and purification of asialoglycoproteins and to develop inhibiting agents against asialoglycoprotein incorporation, or viral and other protein invasion, into liver cells. (Updated on 17-OCT-2003 to standardise OS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         FONSKFORDLVTLRTDFSNFTSNTVAEIQALTSOGSSLEETIASLKAEVEGFKOERQAGV 119
